A Descriptive Statistics

Table A.1: Summary statistics for state-country-survey year analysis, the data used in Table 3 in the main paper.

Characteristic	N = 38,761
Percent in same-sex couples	0.90 (6.54)
State LGB policy score	3 (2)
Country LGB policy score	2(2)
Distance (km)	9,054 (3,469)
Contiguous border	1,181 (3.0%)
Common official language	9,190 (24%)
Common ethnic language	$17,503 \ (45\%)$
Ever colonial relationship	2,006 (5.2%)
Per-cap. GDP difference	-25 (10)
Unemployment difference	2.8(5.9)
Liberal democracy (V-Dem)	0.46 (0.27)
Proportion same-country stock	$0.011 \ (0.033)$
State unemployment rate	6.14(2.31)
State per-capita income	33.1 (5.6)

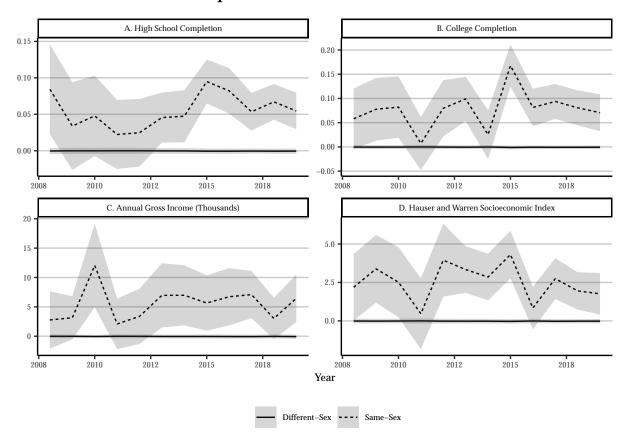

¹ Mean (SD); n (%)

Table A.2: Summary statistics for individual-level dataset, with survey weights applied

Characteristic	Different-sex, $N = 103,454,190$	Same-sex, $N = 702,754$
Country LGB policy score	2 (2)	3 (3)
State LGB policy	3.17(2.43)	3.71(2.31)
Sex		
Female	55,065,604 (53%)	247,457 (35%)
Male	48,388,586 (47%)	455,297~(65%)
Age	43 (11)	42 (11)
Education		
< HS	$23,658,591 \ (23\%)$	$87,394\ (12\%)$
HS	$26,005,315 \ (25\%)$	$151,663\ (22\%)$
some col	13,676,216 (13%)	$115,187 \ (16\%)$
college	40,114,068 (39%)	348,510 (50%)
Number of children	2 (1)	1 (1)
Annual gross income (thousands)	28 (44)	38 (57)
IHS-transformed income	$2.94\ (1.79)$	3.36(1.71)
No income	$21,075,403 \ (20\%)$	96,441 (14%)
Year of immigration	2002 (7)	2004 (8)
Distance (km)	7,529 $(4,459)$	$7,265 \ (4,233)$
Contiguous border	28,507,767 (28%)	165,067 (23%)
Common official language	28,928,974 (28%)	$203,322\ (29\%)$
Common ethnic language	70,797,830 (68%)	475,677 (68%)
Ever colonial relationship	$7,738,946 \ (7.5\%)$	98,230 (14%)
Per-cap. GDP difference	-26 (8)	-23 (9)
Unemployment difference	0.2 (4.4)	0.9(4.7)
Liberal democracy (V-Dem)	$0.41 \ (0.22)$	$0.48 \ (0.24)$
Proportion same-country stock	0.08 (0.10)	$0.06 \ (0.10)$
State unemployment rate	$6.34\ (2.40)$	5.78(2.25)
State per-capita income	35.0 (5.4)	36.4 (5.6)

¹ Mean (SD); n (%)

B Additional Descriptive Trends

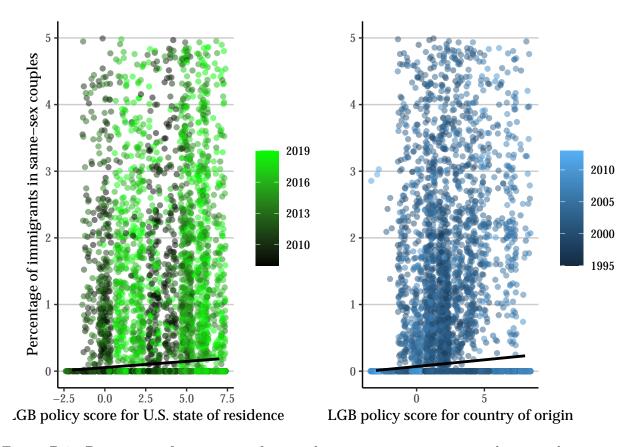

Figure B.1: Proportion of immigrants from each country in same-sex couples in each state, in each survey year, from 2008 to 2019. The left panel's horizontal axis represents the origin country policy score in the mean year of immigration for that group, while the right panel's horizontal axis represents the state policy score in the survey year. Points are jittered for clarity, and percentages above 5 are not shown.

Table B.1: Top 10 sending countries of immigrants in same-sex couples in the American Community Survey 2008-2019

Birth country	n same-sex (unweighted)	n same-sex (weighted)
Mexico	1,170	129,124
Philippines	527	47,101
Canada	419	35,943
Brazil	323	29,679
China	311	$27,\!824$
India	264	$25,\!474$
Colombia	249	23,838
United Kingdom, ns	248	22,451
Germany	177	14,199
Vietnam	167	14,913

Table B.2: Top 10 sending countries of immigrants in different-sex couples in the American Community Survey 2008-2019

Birth country	n different-sex (unweighted)	n different-sex (weighted)
Mexico	201,416	26,028,635
India	100,504	11,486,434
China	63,867	6,522,983
Philippines	50,207	4,870,791
Vietnam	28,342	2,859,629
Canada	27,810	2,479,132
El Salvador	18,795	2,609,505
Colombia	17,367	1,956,214
Brazil	14,586	1,676,089
Other USSR/Russia	13,801	1,448,654

C Adjusting Proportions for Hypothetical Sex Misreporting

Published papers using the ACS to study same-sex couples overwhelmingly use the method by Gates & Steinberger (2009) employed our main paper to adjust for misreporting, where we drop all respondents that had either their relationship or sex variable allocated by the Census Bureau. However here we implement a novel method to adjust proportions of estimated immigrants in same-sex couples, based on the estimated mismatch rates from two U.S. Census Bureau studies. Beginning in 2019, the ACS provides explicit categories for "Opposite-sex husband/wife/spouse," "Opposite-sex unmarried partner," "Same-sex husband/wife/spouse," and "Same-sex unmarried partner" (Walker & Taylor, 2021), so sex misreporting in the 2019 data is unlikely. Hence in most sensitivity analyses below, 2019 estimates are not adjusted for misreporting.

In a Census Bureau working paper, Kreider & Lofquist (2015) use personal information such as names and addresses match same-sex couples from the 2010 ACS to Social Security administrative data. They find that 57 percent of married couples coded as same-sex in the ACS are coded as different-sex in the administrative data. The corresponding sex mismatch rate for unmarried samesex couples is 7 percent. (Our data include 4,632 married and 4,428 unmarried same-sex immigrant couples.) A follow-up study (Kreider et al., 2017) shows that these mismatch rates appear to have fallen: In a 2016 ACS test module that included explicit categories for different- and same-sex spouses and partners, 31 percent of married and 3 percent of unmarried same-sex couples had inconsistent sex responses. This decreasing mismatch rate may be due to the greater numbers of same-sex couples openly identifying themselves as well as the growing popularity of responding to the ACS via Internet (see Table C.1), a response mode introduced in 2013 which is now the default (U.S. Census Bureau, 2017). In the 2016 test of the ACS, the mismatch rate for mail-in responses was 47 and 6 percent for married and unmarried same-sex couples, respectively, whereas for Internet responses they were only 22 and 2.4 percent (Kreider et al., 2017). A computer-assisted telephone interviewing (CATI) or computer-assisted personal interviewing (CAPI) response mode is sometimes administered as well, but the 2016 study did not assess its error rate. In the 2010 ACS, Kreider & Lofquist (2015) find CATI/CAPI sex reporting mismatch for 46 and 13 percent for married and unmarried same-sex couples, respectively. In our sample of immigrants in samesex couples, 2,266 responded by mail, 1,206 responded by CAPI/CATI, and 3,625 responded by Internet survey. Response mode proportions by couple type are shown in Table C.1.

Table C.1: Response mode proportions for different- and same-sex couples, by survey year. Proportions are within columns.

Response mode	Couple type	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
CATI/CAPI	Different-sex	0.454	0.443	0.409	0.422	0.400	0.356	0.351	0.335	0.318	0.291	0.265	0.234
Internet	Different-sex	0.000	0.000	0.000	0.000	0.000	0.443	0.466	0.498	0.530	0.562	0.589	0.626
Mail	Different-sex	0.546	0.557	0.591	0.578	0.600	0.200	0.183	0.166	0.152	0.147	0.146	0.139
CATI/CAPI	Same-sex	0.289	0.238	0.212	0.292	0.231	0.147	0.191	0.136	0.185	0.153	0.131	0.106
Internet	Same-sex	0.000	0.000	0.000	0.000	0.000	0.581	0.587	0.679	0.628	0.676	0.694	0.697
Mail	Same-sex	0.711	0.762	0.788	0.708	0.769	0.273	0.222	0.185	0.187	0.171	0.175	0.197

Figure C.1 takes Model 5 from Table 3 (which includes country and state controls and fixed effects) and reduces the proportions of same-sex couples in the data for pre-2019 data. It varies the percentage of misreported same-sex married couples from 0 to 90 percent and of unmarried couples from 0 to 14 percent; the horizontal axis shows a weighted average of misreporting between these two groups. Highlighted in dashed bars are the empirical mismatch rates found in the two studies by Kreider & Lofquist (2015) and Kreider et al. (2017). We see that even extremely high

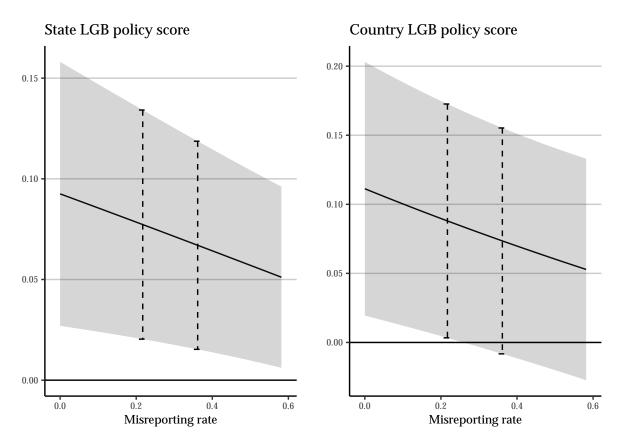

Figure C.1: Coefficients for sending-country and U.S. state LGB policy context for Model 5 from Table 3 in the main paper, adjusted for hypothetical misreporting rates of married and unmarried same-sex couples in pre-2019 data. Ribbon shows 95 percent confidence intervals and dashed bars show estimated misreporting from the 2010 and 2016 U.S. Census Bureau tests on the ACS.

misreporting rates in the pre-2019 ACS do not render these coefficients insignificant.

Table C.2 shows the mismatch rates estimated by Kreider & Lofquist (2015) and Kreider & Lofquist (2015). In the analysis below (Table C.3), we use these apparent mismatch rates to adjust proportions used in models in Table 3 of the main paper. Each proportion is adjusted separately by marital status and response mode. For example, all internet respondents coded as being in married same-sex couples have their final proportion reduced by 22.5%. For mail-in responses, the proportions are reduced by the average between the two studies (53.2 percent for married and 6.3 percent for unmarried couples). Results are quite robust to high levels of misreporting.

Table C.2: Mismatch rates from Kreider & Lofquist (2015) and Kreider et al. (2017)

Study Year	Relationship	Mail	Internet	CAPI/CATI	Overall
2,010	Married	59%	NA	46%	57.3%
2,010	Unmarried Partner	7%	NA	13%	7%
2,016	Married	47.4%	22.5%	Unknown	35%
2,016	Unmarried Partner	5.6%	2.4%	Unknown	3.4%

Table C.3: Adjusted by rates of empirical sex mismatch by married, unmarried, and response mode. Percent same-sex in by country of origin, U.S. state, and survey year.
